Paper ID 2855

1. Overview

This supplementary material provides additional qualitative results and visualizations supporting the main paper. In particular, we showcase the dynamic scene reconstruction capabilities of our ReCan-GS method through interactive and high-resolution demonstrations. We also provide a series of results on Fog/Smoke removal and extended quantitative tables for our retained geometry human evaluation. Please open the `index.html` file to view the supplementary results. For the best visual fidelity and playback, we recommend using Google Chrome.
